Tenant Lead Law Notification

Before renting a home built before 1978, the property owner and the new tenant must sign two copies of this Tenant Lead Law Notification and Tenant Certification Form, and the property owner must give the tenant one of the signed copies to keep. If any of the following forms exist for the unit, tenants must also be given a copy of them: lead inspection or risk assessment report, Letter of Compliance, or Letter of Interim Control. This form is for compliance with both Massachusetts and federal lead notification requirements.

What is lead poisoning and who is at risk of becoming lead poisoned?

Lead poisoning is a serious environmental hazard. It is most dangerous for children under six years old. It can cause permanent harm to young children's brain, kidneys, nervous system and red blood cells. Even at low levels, lead in children's bodies can slow growth and cause learning and behavior problems. Young children are more easily and more seriously poisoned than others, but older children and adults can become lead poisoned too. Lead in the body of a pregnant woman can hurt her baby before birth and cause problems with the pregnancy. Adults who become lead poisoned can have problems having children, and can have high blood pressure, stomach problems, nerve problems, memory problems and muscle and joint pain.

How do children and adults become lead poisoned?

Lead is often found in paint on the inside and outside of homes built before 1978. Lead paint in these homes causes almost all lead poisoning in young children. The main way children get lead poisoning is from swallowing lead paint dust and chips. Lead is so harmful that even a small amount can poison a child. Lead paint under layers of nonleaded paint can still poison children, especially when it is disturbed, such as through normal wear and tear and home repair work. Lead paint dust and chips in the home most often come from peeling or chipping lead painted surfaces; lead paint on moving parts of windows or on window parts that are rubbed by moving parts; lead paint on surfaces that get bumped or walked on, such as floors, porches, stairs, and woodwork; and lead paint on surfaces that stick out which a child may be able to mouth such as window sills.

Most lead poisoning is caused by children's normal behavior of putting their hands or other things in their mouths. If their hands or these objects have touched lead dust, this may add lead to their bodies. A child can also get lead from other sources, such as soil and water, but these rarely cause lead poisoning by themselves. Lead can be found in soil near old, lead-painted homes. If children play in bare, leaded soil, or eat vegetables or fruits grown in such soil, or if leaded soil is tracked into the home from outside and gets on children's hands or toys, lead may enter their bodies. Most adult lead poisoning is caused by adults breathing in or swallowing lead dust at work, or, if they live in older homes with lead paint, through home repairs.

How can you find out if someone is lead poisoned?

Most people who are lead poisoned do not have any special symptoms. The only way to find out if a child or adult is lead poisoned is to have his or her blood tested. Children in

Massachusetts must be tested at least once a year from the time they are between nine months and one year old until they are four years old. Your doctor, other health care provider or Board of Health can do this. A lead poisoned child will need medical care. A home with lead paint must be deleaded for a lead poisoned child to get well.

What can you do to prevent lead poisoning?

- Talk to your child's doctor about lead.
- Have your child tested for lead at least once a year until he/she is four years old.
- Ask the owner if your home has been deleaded or call the state Childhood Lead Poisoning Prevention Program (CLPPP) at 1-800-532-9571, or your local Board of Health
- Tell the owner if you have a new baby, or if a new child under six years old lives with you.
- If your home was deleaded, but has peeling paint, tell and write the owner. If he/she does not respond, call CLPPP or your local Board of Health.
- Make sure only safe methods are used to paint or make repairs to your home, and to clean up afterwards.

In Massachusetts, what must the owner of a home built before 1978 do if a child under six years old lives there?

An owner of a home in Massachusetts built before 1978 must have the home inspected for lead if a child under six years old lives there. If lead hazards are found, the home must be deleaded or brought under interim control. Only a licensed deleader may do high-risk deleading work, such as removing lead paint or repairing chipping and peeling lead paint. You can get a list of licensed deleaders from the state Department of Labor and Workforce Development. Deleaders are trained to use safe methods to prepare to work, do the deleading, and clean up. Either a deleader, the owner or someone who works for the owner who is not a licensed deleader can do certain other deleading and interim control work. Owners and workers must have special training to perform the deleading tasks they may do. After the work is done, the lead inspector or risk assessor checks the home. He or she may take dust samples to test for lead, to make sure the home has been properly cleaned up. If everything is fine, he or she gives the owner a Letter of Compliance or Letter of Interim Control. After getting one of these letters, the owner must take care of the home and make sure there is no peeling paint.

What is a Letter of Compliance?

It is a legal letter under state law that says either that there are no lead paint hazards or that the home has been deleaded. The letter is signed and dated by a licensed lead inspector.

What is a Letter of Interim Control?

It is a legal letter under state law that says work necessary to make the home temporarily safe from serious lead hazards has been done. The letter is signed and dated by a licensed risk assessor. It is good for one year, but can be renewed for another year. The owner must fully delead the home and get a Letter of Compliance before the end of the second year.

Disclosure of Information on Lead Based Paint and Hazards

 a. Presence of lead-based paint and/or lead-ba i Known lead-based paint and/or l housing (explain). 	- `
